

LineView™ – The benefits of common system

Accolade Wines produces many of the World’s best-known wine brands. Their primary production facilities have a combination of high-speed bottling lines, bag-in-box lines and bag-making machinery. The management team had invested in real-time data collection, but were not getting the results they had expected.

The problem

Accolade Wines recognised the need for better information and had invested significantly in Krones’ LDS and Idhammar’s OEE systems to track and monitor performance across their factory. However, the production team had found it increasingly difficult to implement the effective operational routines needed to improve performance. This was driven by two key factors:

- The data structure and presentation for each system was very different, making it difficult to compare data and impossible to standardise the approach to performance reviews.
- Plus, neither system provided accurate causal loss information, meaning that the performance data from either system could not reliably focus the team in the right area.

The result was that, beyond the initial uplift due to the greater focus on performance, there had been no significant sustained performance improvements achieved for a couple of years.

How we helped

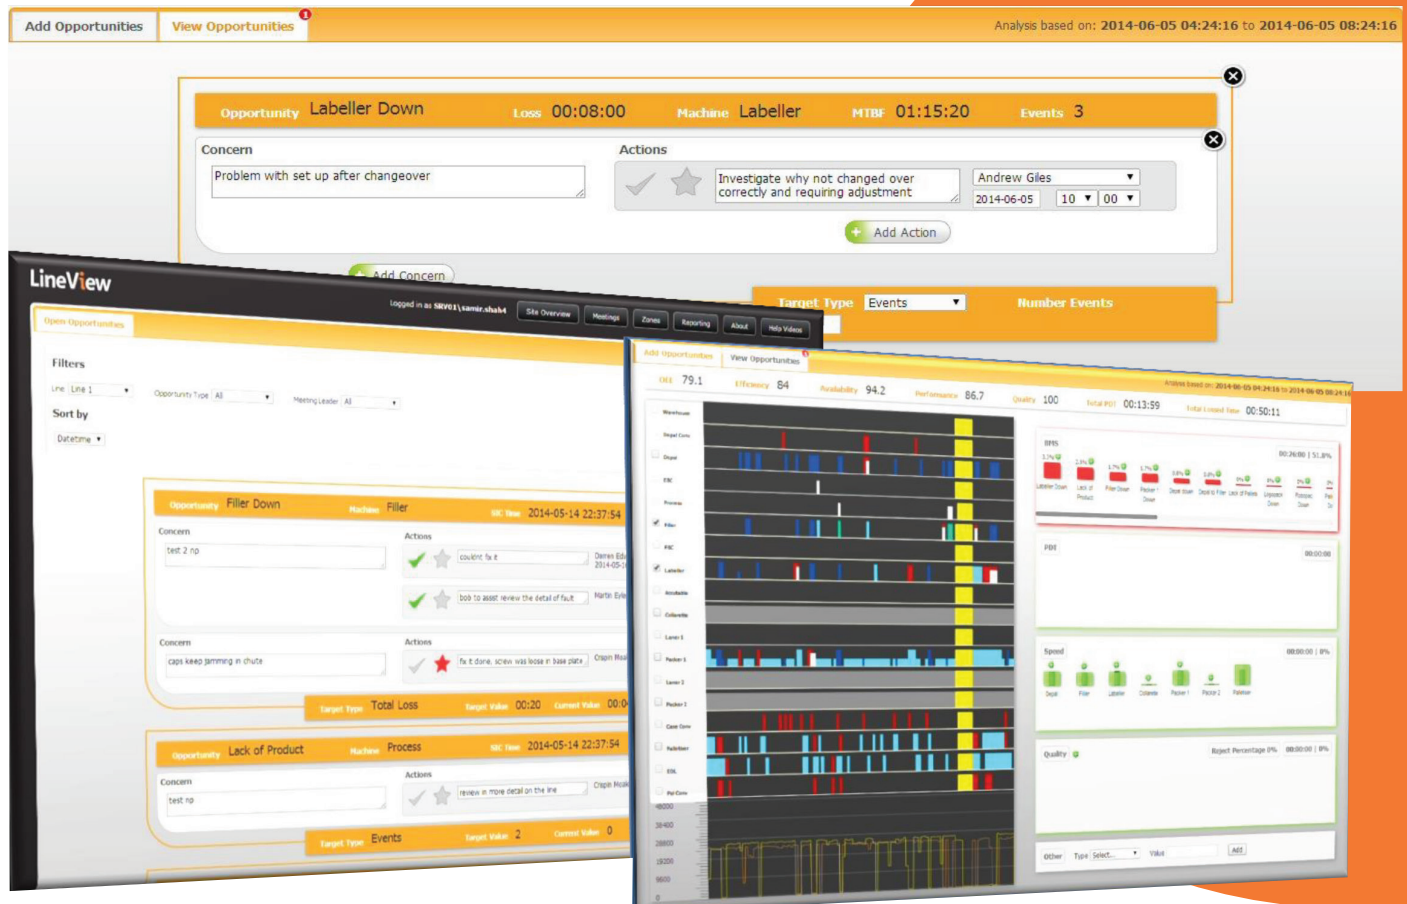

LineView Solutions used the existing infrastructure and data availability to replace both of the installed systems with LineView™. LineView’s installation approach, scalability and single user-interface make it cost-effective and powerful for both high-and low-complexity equipment.

continues over...

LineView’s installation approach, scalability and single user-interface make it cost-effective and powerful for both high- and low-complexity equipment.

With all equipment now accessible through a common system, and all subject to LineView™'s advanced causal loss logic, the teams now had the confidence and commitment to build a common method of completing tactical, short-interval control (SIC) using this data.

In addition, the LineView™ interface replicated this routine within the software to provide the stimulus for regular, repeatable and effective reviews as well as vital action tracking and compliance information for Accolade Wines on their new chosen routines.

The results

- Routines became sustainable and transferable between different team members.
- Regular, repeated, sustained increases in line efficiency.
- Lineview™ is the standard platform for the global business.
